

FOR INTERNAL USE ONLY

Brightening Line

BRIGHTENER ●

Topically Applied.

A daily, high potency treatment that targets all pathways involved in melanogenesis, while avoiding the cytotoxic properties of HQ.

PRO BRIGHTENING MCS ●

Delivered with a Microchannel Roller or Stamp at depths of 0.25 mm.

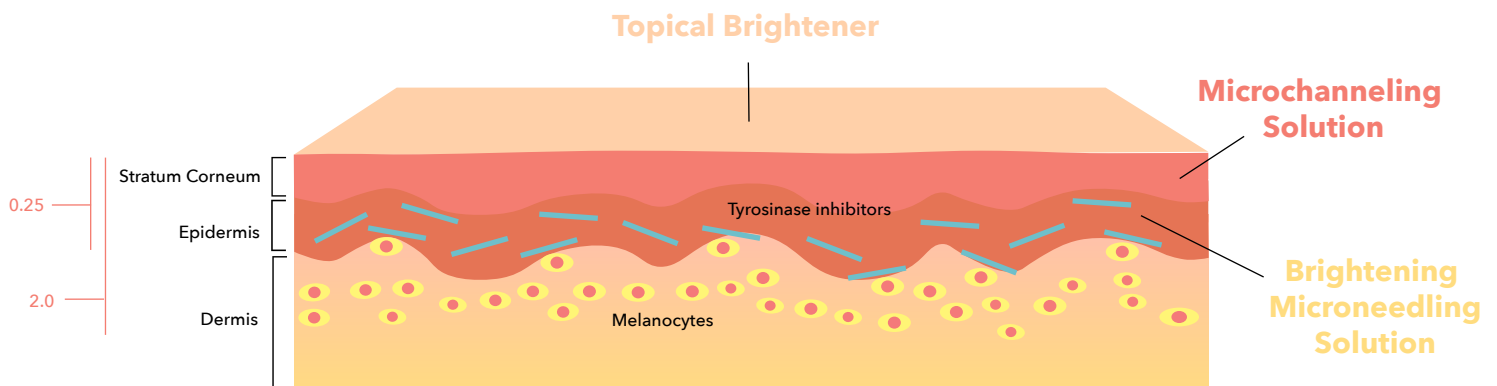

An esthetician exclusive professional solution for mild pigmentation, designed to be infused into the skin at shallow needle depths. This also helps to increase the brightness of the skin and increases skin glow.

MD BRIGHTENING MNS ●

Delivered with a Microneedling Device at depths up to 2.0mm.

A targeted, clinical strength microneedling adjuvant that specifically works on melanogenesis pathways to provide a safe and effective in-clinic treatment for moderate to severe hyperpigmentation. (You would use this over the regular MD Microneedling Solution when you are wanting to treat hyperpigmentation specifically, but also anti-aging).

Formulated with Tranexamic Acid and NAG, this is the first of its kind to work as a Tyrosinase inhibitor with the regenerative properties of bone marrow stem cells.

Tyrosinase inhibitors work safely at deeper levels with brightening microneedling solution to stop pigment from forming
